

Adidas US Sales Analysis (Excel-Only)

Tools: Excel (PivotTables, PivotCharts, Slicers, formulas) **Dataset:** [Adidas US Sales Datasets](#) (Kaggle) — 9,653 transactions, 2020–2021

Business Question

Which sales channels, regions, and retailers are actually driving profit — not just revenue — and can the raw numbers be trusted?

Approach

Built entirely in Excel using PivotTables for analysis and native Pivot-Charts/Slicers for an interactive dashboard — no external BI tool, demonstrating a fully functional dash-board.

Data-Quality Catches

Before trusting any finding, three issues were found and corrected through cross-validation against source fields:

1. **Total Sales was inflated 10x** — verified against Price per Unit x Units Sold across all 9,653 rows and corrected
2. **Operating Profit was derived from the corrupted Total Sales**, making it inconsistent — recalculated as Corrected Total Sales x Operating Margin
3. **2020 data has uneven retailer coverage** — Amazon and Kohl's have little to no recorded transactions in 2020, meaning the apparent 2020-to-2021 "growth" partly reflects data coverage, not real business performance. This caveat is flagged directly on the dashboard's time series chart rather than hidden.

Key Findings

1. In-store is the weakest-margin sales channel Despite solid transaction volume, In-store sales carry the lowest average operating margin (35.6%) of the three channels — Online leads at 46.4%, with Outlet in between at 39.5%.

2. West region: highest sales, lowest margin West leads all regions in total sales but has the lowest average margin (39.7%). Southeast is the inverse — mid-pack sales, the highest margin (46.7%) of any region.

3. Sports Direct is the standout retailer on efficiency Sports Direct isn't the top seller by volume, but posts the highest average operating margin (44.5%) of any retailer — outperforming larger-revenue retailers like Walmart (40.7% margin).

Recommendation

Investigate cost structures behind In-store and West-region sales specifically — both drive strong revenue but underperform on margin relative to smaller channels/regions, suggesting inefficiencies rather than a demand problem.
